DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-3, drawn to a gas combustion type hair drier with a combustor including a primary combustion chamber and a secondary combustion chamber.

Group II, claim(s) 4-5, drawn to a gas combustion type hair drier with magnet unit and switching controller.

Group III, claim(s) 6, drawn to a method of generating negative ions.

2. The inventions listed as Groups I, II, III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the inventive concept for the Group I claims is combination of the limitations regarding a combustor including a primary combustion chamber, combusting mixed gas with the fuel gas, supplied from the gas tank, and primary air, and a secondary combustion chamber to which gases, resulting from combustion in the primary combustion chamber, and secondary air are supplied for combustion and an ejector that draws the primary air into a gas flow path, leading from the gas tank to the combustor, due to a negative pressure caused by a flow speed of the fuel gas supplied to the combustor. The inventive concept for the Group II claims is the combination of the limitations regarding a

magnet unit operative to keep a supply of the fuel gas to a gas flow path leading from the gas tank to the combustor; an ignition detector detecting an ignited condition depending on an external wall temperature of the combustor; an overheat detector detecting an overheated condition of hot blast resulting from the combustion chamber; and a switching controller operative to control the magnet unit and operation of the blower in response to detection signals delivered from the ignition detector and the overheat detector. The inventive concept for the Group III claims is the step of permitting gases, resulting from combustion in the primary chamber, to be supplied to the secondary combustion chamber and mixed with the secondary air for complete combustion while causing turbulent flows to occur; and activating molecular motions of a large number of water molecules generated upon combustion of the fuel gas thereby generating the negative ions.

3. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In

Art Unit: 3749

either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jiping Lu whose telephone number is 571 272 4878. The examiner can normally be reached on Monday-Friday, 9:00 AM - 5:30 PM.
